

Sep 11st, 2025

Dear Editor,

Thank you for your feedback regarding our manuscript entitled “Cross-Body Site Microbial Interactions Influence the Human Plasma Metabolome”.

We have carefully revised our Data Availability Statement to ensure compliance with the journal’s data policy. Specifically:

Metagenomic sequencing data

Discovery cohort: deposited in the NCBI Sequence Read Archive (SRA) under accession code PRJNA281230 (<https://www.ncbi.nlm.nih.gov/bioproject/PRJNA281230>).

Validation cohort 1: deposited in the European Nucleotide Archive (ENA) under accession code PRJEB64861 (<https://www.ebi.ac.uk/ena/browser/view/PRJEB64861>).

Validation cohort 2: deposited in the NCBI SRA under accession code PRJNA1201249 (<https://www.ncbi.nlm.nih.gov/bioproject/PRJNA1201249>).

Metabolomics data

The metabolomics datasets from the three cohorts were originally generated in different formats. To facilitate accessibility and consistent use, we have reprocessed them under a unified standard and deposited them as tabulated files in Figshare (<https://doi.org/10.6084/m9.figshare.30100708.v1>). This ensures that reviewers and future readers can readily review and reuse the data.

Supporting information

All source data supporting the findings are provided in the Supplemental Information files.

We hope this revision addresses the journal’s requirements.

Yours sincerely,

Xiaotao Shen, Ph.D.

Director of Singapore Phenome Center,

Lee Kong Chian School of Medicine, Nanyang Technological University, Singapore.
